

The following instructions will help you to install your template.

1. Installation

There are two ways of installing:

- a) Through the admin section of your Joomla CMS
- b) Manually (by copying all template files in the templates directory of your Joomla CMS)

Installing through the installer of your Joomla CMS.

In the administrator section of your site go to the main menu, then Extensions -> Install/Uninstall.

Then in the "Upload package file" section open the File upload dialogue box by clicking on the "browse" button, find the zipped template, click Open and then click Upload file & install.

Then go to the administrator section, using the main menu go to Extension -> Template manager -> Site templates. Then choose the newly installed template by clicking on the radio box and click Default in the upper right corner. This way you make your template the default one for your site.

Installing through the admin section of your Joomla site.

First you have to copy the template to the "templates" folder of your Joomla CMS.

Then go to the administrator section, there through the main menu go to Extension -> Template manager. Then choose the newly installed template by clicking on the radio box and click Default. This way you make your template the default one for your site.

2. Changing modules position and applying class suffixes.

Our templates are supplied with predefined module positions, for instance top menu is placed on the top block. That means that the "top menu" module should be assigned to Top position in the modules section. Right after Joomla installation, modules are assigned to different positions, in order to make the template look as it is given on our live demo you are supposed to assign modules to their positions and change the class suffix values in the following way.

a) In the administrator section go to Extension -> Module Manager

b) open each module from the list bellow and assign it to the given position and apply the class suffix to it:

| Module Name | Position | Module Class Suffix | Published | Show title |
|---------------|------------|---------------------|-----------|------------|
| Breadcrumbs | breadcrumb | - | no | yes |
| Banners | footer | - | no | yes |
| Footer | footer | - | no | yes |
| Main Menu | left | _menu | yes | yes |
| User Menu | left | - | no | yes |
| Statistics | left | - | no | yes |
| Login Form | left | _s2 | yes | yes |
| Archive | left | - | no | yes |
| Sections | left | - | no | yes |
| Related Items | left | - | no | yes |
| Wrapper | left | - | no | yes |
| Feed Display | left | - | no | yes |
| Polls | right | - | yes | yes |

| | | | | |
|---------------|-----------|------|-----|-----|
| Who's Online | left | _s4 | yes | yes |
| Advertisement | right | - | no | yes |
| Random Image | right | - | no | yes |
| Syndication | syndicate | - | no | yes |
| Newsflash | right | - | no | yes |
| Latest News | right | - | yes | yes |
| Popular | right | - | no | yes |
| Top Menu | top | _s10 | yes | no |
| Search | user1 | - | yes | no |

c) after all the necessary changes are applied you have to save the values of each module by clicking “save”.

Attention! By default Joomla! 1.5 installation comes with only the Main Menu module installed therefore to make your Joomla site look like our live demo you have to install all necessary modules through the administration section of your site. Also you have to add All menu Items and articles yourself.

3. Changing Menu Style:

The top menu style should be set to “List”. To change the style go to Extensions -> Module Manager, there choose Top Menu. In the opened window find the parameters field and set the Menu Style property to “List”. Make sure that menu class suffix is set to '-nav'

The main menu style should be set to “List”. To change the style go to Extensions -> Module Manager, there choose Main Menu. In the opened window find the parameters field and set the Menu Style property to “List”.

4. In order to make topmenu and mainmenu look exactly as on the Live Demo of your template, you should go to Menus -> [menuname] and create menu items.
5. To enable Full Active Highlighting (if it is available), you should go to Extensions -> Module Manager -> [menuname]: and set the Full Active Highlighting feature to “yes”.
6. It is necessary to set the amount of columns on the front page to 1. In order to do that, you should go to Menus -> [menuname]:Home, locate 'Parameters; Basic' and set Columns to 1. With that done, you should go to Menus -> [menuname]:Blog and specify 1 as the value for the amount of columns as well.
7. To display the same images as on the preview page of your template, you should go to the “stories” folder of your Joomla template and copy all the images from the folder to the “images/stories” folder of your Joomla engine.
